

# At sea

In and around a rough sea, birds dive into the water to catch fish, and seals laze on the shore. Unusual creatures and plants make their homes just under the rolling waves, too.

## Lounging seals

These seals have crowded onto a beach to bring up their young pups. Can you count how many adults there are? Then find the seal pups.

Clue: they're a different colour than the adults.

..... adults and ..... pups

## Underwater hunters

Hungry seals dive into the sea to hunt for fish and other sea creatures.

They can hold their breaths for up to an impressive 30 minutes. Some even go to sleep underwater.
